Tuesday, 23 February 2010

While Lexus is known to be stylish and luxurious, it's now good for the environment.

While this new new hybrid has the same popular sleek lines of the previous GS 430 model, this new model makes the limousine seem closer to the ground that it's actually making this car appear sporty as well.

It can be opened using the SmartAccess which transmits a signal to the car so that the key doesn't even have to leave your pocket. The limo also has 8 sensors that can help you with parking. It comes with an exclusive alloy wheel design that helps with performance ensuring a quicker steering and better handling.

To allow the outside in, Lexus has also added a power moonroof that can be tilted and slide to allow the amount of light and air that you please. It not only has good looks but is great for the environment by using energy efficient features and also looks after its passengers with the traditional levels of comfort and style.
